

The Challenge or problem

A single, trusted and infallible identity warranty system that allows the user to push true identity to all secure environments that they interact with: health, government, banking, mobile phones, internet, cable and satellite systems, etc.

Fault tolerant and reliable biometrics that never present false negatives or positives.

Primary interests

Identity

Secure sign on

Safe Biometrics

Access to all stakeholders

Improved information systems

Flexibility, adaptability and value for money

The Approach to address the Challenges

The development of secure software systems that utilise leading industry-standard secure identification systems.

Identity push by the identified individual rather than multiple channel, multiple identity pull by many servicing data points.

Multiple-factor biometrics using digital, dynamic and fuzzy logic compounds to provide accurate physical identification.

Goals in attending workshop

Dissemination of philosophy and explanation of product approach.

Networking

Seeking implementation partners
